MVP Finance: Strategic Project Plan & Engine Integration

Financial Hardship & Protection Strategy | .NET 10 / Angular 21 Software Architecture Roadmap

> **Executive Context:** This document establishes an operational and technical roadmap for managing **$50,342.19** in unsecured credit card debt while shielding protected **$22,000 State Disability Insurance (SDI)** payout funds, maintaining CapOptima (Medi-Cal) healthcare access, and keeping federal student loans locked at **$0/month** under IDR. Simultaneously, it details the software engineering plan for the open-source **bijanp24/mvp-finance** application (.NET 10 Minimal API backend and Angular 21 UI) to automate burn-rate tracking, hardship monitoring, and cash runway calculations.

1. CREDIT ACCOUNT INVENTORY & HARDSHIP DEACTIVATION STRATEGY

With Capital One's 0% promotional rate expiring on **October 16, 2026** (returning to a 21%+ APR), immediate intervention is required. All cards will be placed on internal bank hardship plans or consolidated through a non-profit Debt Management Plan (DMP) via the National Foundation for Credit Counseling (NFCC) to freeze interest rates, lower fixed monthly payments, and deactivate cards.

Card Account	Card #	Total Balance	Min. Payment	Due Date	Promotional / Interest Status
Wells Fargo Active Cash	[redacted]	$13,475.57	$226.24	10/08/2026	Standard APR; immediate hardship target
Capital One Discover Card	[redacted]	$21,996.07	$439.00	10/13/2026	**0% Promo ends 10/16/2026 (Jumps to 21%+)**
Amex Gold Card	[redacted]	$6,242.50	$127.00	10/16/2026	Enrolled in Financial Relief Program
Wells Fargo Micro Center	[redacted]	$3,003.84	$148.08	10/27/2026	0% Special Financing expires 09/02/2027
Amex Blue Cash Preferred	[redacted]	$5,624.21	$99.00	11/01/2026	Standard APR; scheduled for DMP/Hardship
TOTALS	**-**	**$50,342.19**	**$1,039.32**	**-**	**Card Deactivation & Hardship Target**

- **Capital One Priority Call:** Contact Loss Mitigation prior to 10/16/2026. Inform representative of non-taxable disability status and pending legal claim. Request 0%–9% interest rate lock and account deactivation.
- **Wells Fargo & Amex Enrollment:** Transition Active Cash [redacted] and Micro Center [redacted] into hardship programs. Re-confirm Amex Gold [redacted] relief terms and add Blue Cash Preferred [redacted]
- **Non-Profit DMP Alternative:** If direct issuer hardship is declined, initiate a Debt Management Plan with NFCC to consolidate payments into a single lower monthly draft.

2. PROTECTED DISABILITY RUNWAY & ESSENTIAL EXPENSE SHIELDING

State Disability Insurance (SDI) payments ($22,000 incoming) and future IRS tax refunds are legally protected resources intended solely for health, sustenance, and job procurement equipment—not for servicing unsecured debt.

- **Segregated Account Protection:** Deposit the $22,000 disability check into a standalone, dedicated bank account. Do NOT commingle disability funds with general income to maintain statutory garnishment protection from creditors.
- **$0 Federal Student Loan IDR:** Because SDI benefits are non-taxable and excluded from Adjusted Gross Income (AGI), self-certify $0 income on the Federal Student Aid portal under IDR to lock in $0/month payments for 12 months.
- **IRS Tax Refund Security:** Private credit card issuers cannot intercept IRS tax refunds (offsets are restricted to federal tax debt or child support). Refunds remain fully accessible for living expenses.
- **Healthcare & Medi-Cal (CapOptima):** Maintain CapOptima health coverage while actively addressing medical and recovery needs, protecting against healthcare cost exposure.
- **Engineering Equipment Retention:** Shield Software Engineer hardware, workstation tools, GitHub, Google Workspace, and developer software from liquidations as essential income-generating tools.

3. MVP-FINANCE SOFTWARE INTEGRATION & ENGINE ARCHITECTURE

The **bijanp24/mvp-finance** repository is built on a local-first **.NET 10 Minimal API backend (FinanceEngine)**, an **Angular 21 single-page dashboard UI**, and an **SQLite event-sourcing ledger**. Hardship ledger modules will be integrated directly into this architecture.

Layer / Module	Technology Stack	Target Core Responsibility
Backend Core	.NET 10 Minimal API (FinanceEngine)	Event-sourced transaction processor, burn rate calculator, rate expiry engine.
Database Layer	SQLite + Event Sourcing	Local-first immutable event ledger for checking & credit statement imports.
Frontend UI	Angular 21 (dashboard)	Real-time metrics, Runway Widget, and Hardship Program Action Matrix.
Documentation	Markdown Handoff Architecture	Multi-agent documentation (HANDOFF_AI_WORKFLOW.md, CLAUDE.md).

4. CORE BACKEND MODULES & SCHEMA DESIGN

- **Checking Account Parser & Categorizer:** Extend existing PDF/CSV import pipelines in FinanceEngine.Tests to ingest checking statements. Automatically flag essential software engineering equipment, cloud hosting, and healthcare costs while filtering out deactivated credit card minimums.
- **'Spendable Now' & Burn Rate Engine:** Implement a specialized calculation module that excludes non-spendable debt obligations, determining exact cash runway derived from protected disability balances ($22,000) divided by monthly essential baseline costs.
- **Promotional Rate & Hardship Expiry Tracker:** Add domain models for credit card promotional terms (e.g., Capital One 0% APR expiring 10/16/2026 and Micro Center 0% expiring 09/02/2027) with event alerts and status flags (*Active*, *Hardship Enrolled*, *DMP Frozen*).

5. ANGULAR 21 UI WIDGETS & ACTION DASHBOARD

- **Runway & Cash Protection Widget:** Visual display showing *Spendable Cash* ($22,000 SDI) vs. *Monthly Essential Burn*, providing a live countdown of financial runway months without relying on credit.
- **Hardship Action Matrix:** A dedicated interactive Angular component tracking all 5 credit accounts, displaying interest rates, current minimums, call statuses, negotiation target APRs, and DMP enrollment status.
- **Developer Handoff Updates:** Update project handoff documents to define new API endpoints (GET /api/runway, POST /api/hardship/account) and Angular state signals.

6. PHASED IMPLEMENTATION TIMELINE & CHECKLIST

Phase	Target Date	Financial & Engineering Deliverables	Status
Phase 1: Urgent Mitigation	Oct 09–Oct 15, 2026	Call Capital One Loss Mitigation (0% expiry 10/16). Setup segregated bank account for $22k SDI payout. Self-certify $0 IDR student loan.	**IN PROGRESS**
Phase 2: Hardship & DMP	Oct 16–Oct 31, 2026	Enroll remaining cards (Wells Fargo & Amex) in hardship/DMP plans. Confirm card deactivation. Complete checking import parser in FinanceEngine.	PENDING
Phase 3: Engine Integration	Nov 01–Nov 15, 2026	Deploy Spendable Now & Burn Rate calculation endpoints in .NET 10. Implement Rate Expiration Tracker domain logic.	PENDING
Phase 4: Dashboard UI	Nov 16–Nov 30, 2026	Build Angular 21 Runway Widget & Hardship Action Matrix UI. Update repo handoff docs and publish v1.0 local build.	PENDING

> **Focus & Alignment:** Executing the credit deactivation hardship strategy and protecting the $22,000 disability funds secures full mental bandwidth for health, recovery, and Software Engineering work. The mvp-finance app will serve as your automated personal dashboard to enforce this financial clarity.
